

Case Study

Mental Health Treatment Model

Eventus WholeHealth provides results-oriented high standard medical services to our long term care partners. Within our integrated service model we are committed to making great strides within Mental Health, with reductions of anti-psychotic rates, costs, admissions, and overall improvements across other key metrics.

We are unique in our model and results, the following is an overview of our results serving the total Mental Health services for various national facilities.

Summary

Typical reductions of 50-75% in nursing home anti-psychotic rates and reductions of 50-100% in PRN psychotropics after beginning our integrated services - with anti-psychotic rates less than half of the national average.

Criteria
